

RHINO ENERGY

ENERGY PRODUCTION SOLUTIONS

Unlock the potential of challenging wells.

Strategic production solutions for mature, underperforming and inactive oil & gas assets.

RHINO ENERGY LLC

Commercial development • Technical coordination • Field execution

UNITED STATES • LATIN AMERICA

One Partner. One Point of Contact. One Integrated Solution.

THE RHINO ENERGY DIFFERENCE

We don't just sell a treatment. We develop the opportunity.

Rhino Energy LLC is a U.S.-based energy solutions company focused on identifying and developing opportunities to improve production from challenging oil and gas assets.

Our role is to bring together the commercial relationship, technical evaluation, specialized technology and field execution required to determine whether an underperforming or inactive well can be returned to productive and economic operation.

Through our strategic technology network, we provide access to specialized petroleum chemistry, laboratory analysis, engineering, stimulation and field-service capabilities — while our client works directly with Rhino Energy.

IDENTIFY

Find production opportunities in mature, low-producing and inactive wells.

EVALUATE

Understand the technical and economic potential before intervention.

ENGINEER

Match the well with the appropriate treatment strategy.

EXECUTE

Coordinate the field operation through specialized service capabilities.

MEASURE

Evaluate the production response and economic impact.

BUILD VALUE

Create repeatable production opportunities from existing assets.

WHO WE ARE

A commercial and technical bridge between energy assets and specialized production solutions.

Rhino Energy was built to address a recurring challenge in the oil & gas industry: valuable production opportunities can be overlooked when a mature or underperforming well requires specialized knowledge, chemistry and field execution.

We bring these capabilities together through a coordinated model designed around the asset — not around a single product.

Our clients work with one company and one commercial relationship: Rhino Energy LLC.

MISSION

Create measurable value from challenging energy assets.

Our mission is to connect operators and asset owners with the technology, technical expertise and field capabilities required to restore production, improve well performance, extend productive well life and identify economically viable opportunities.

VISION

Become a leading energy solutions platform across the Americas.

Our vision is to build a trusted network connecting energy operators throughout the United States and Latin America with advanced production technologies and specialized field capabilities.

Production solutions for challenging wells.

Our capabilities are designed around the specific production challenge. We start with the well, identify the restriction and determine whether an intervention makes technical and economic sense.

WELL & ASSET EVALUATION

Review of production history, well characteristics, operating conditions, previous treatments and available field information.

CHEMICAL WELL STIMULATION

Customized treatment strategies for paraffin, asphaltenes, organic deposits, inorganic scale and near-wellbore restrictions.

HEAVY CRUDE SOLUTIONS

Specialized approaches addressing viscosity, flow characteristics and deposit formation associated with heavy crude.

WELLBORE CLEANING

Solutions designed to address deposits and contaminants that restrict flow within the wellbore and near-wellbore environment.

CHEMICAL & TECHNICAL ENGINEERING

Access to laboratory analysis, compatibility testing, treatment formulation, dosage determination and technical design.

FIELD APPLICATION

Coordination of logistics, specialized equipment, high-pressure pumping, treatment placement, field supervision and production monitoring.

From production challenge to field execution.

A disciplined process helps determine the right solution before resources are committed to the well.

01	IDENTIFY	Locate wells and assets with potential production opportunities.
02	EVALUATE	Review technical, operational and commercial information.
03	ANALYZE	Use appropriate samples, laboratory work and technical assessment.
04	ENGINEER	Develop a customized intervention strategy.
05	EXECUTE	Coordinate the treatment and field operation.
06	MEASURE	Evaluate production response and potential economic value.

IDENTIFY → EVALUATE → ANALYZE → ENGINEER → EXECUTE → MEASURE

WHY RHINO ENERGY

One relationship. Multiple specialized capabilities.

Rhino Energy is designed for operators and asset owners who want access to specialized production solutions without having to manage separate commercial and technical relationships.

COMMERCIAL FOCUS

We identify opportunities, develop relationships and structure projects around the client's objectives.

TECHNICAL ACCESS

Our strategic network provides access to specialized chemistry, laboratory and engineering capabilities.

FIELD COORDINATION

We coordinate the resources required to move from technical design to practical field execution.

RESULTS ORIENTED

The goal is measurable production improvement and a clear understanding of the economic outcome.

WHO WE SERVE

OIL & GAS OPERATORS

Companies seeking to improve production from existing assets.

ASSET & WORKING INTEREST OWNERS

Owners seeking to increase the productive potential of their interests.

INDEPENDENT PRODUCERS

Operators seeking specialized solutions without building extensive internal technical infrastructure.

ENERGY INVESTMENT GROUPS

Organizations evaluating mature assets and production-enhancement opportunities.

THE BUSINESS CASE

Turn underutilized production potential into an evaluated opportunity.

Mature and underperforming wells can face production restrictions caused by deposits, flow limitations, heavy crude characteristics, near-wellbore conditions or other operational factors.

Rhino Energy's approach is to evaluate the opportunity before recommending an intervention. This helps the operator answer the questions that matter:

CAN THE WELL BE IMPROVED?	Assess whether the identified production challenge is technically addressable.
WHAT IS THE RIGHT APPROACH?	Match the intervention strategy to the characteristics of the well.
DOES IT MAKE ECONOMIC SENSE?	Consider expected production impact, treatment requirements and project economics.
HOW DO WE EXECUTE IT?	Coordinate technical resources, logistics and field application through Rhino Energy.

OUR OBJECTIVE

Restore production. Extend asset life. Create measurable value.

LET'S TALK ABOUT YOUR ASSET

Have a challenging well?

If you have a low-producing well, inactive well, mature field, heavy-crude challenge, production affected by deposits, scale or other wellbore restrictions, Rhino Energy can help evaluate the opportunity.
